GFOA Budgeting Series
THE ESSENTIAL SEVEN REFERENCE TOOLS FOR PUBLIC FINANCE OFFICERS

1. Balancing budgets is one of the biggest challenges facing state and local governments today.

2. Recognizing the critical need for new approaches, GFOA offers the Budgeting Series, containing leading-edge concepts, practices, and tools governments can use to enhance their budget practices.

3. Benchmarking and Measuring Debt Capacity
   - This book provides a useful analytic approach to implementing NACSLB recommended budget practices on measuring debt capacity and implementing debt policies. Using a case study of the City of Pittsburgh, Pennsylvania, the authors illustrate how data collection and analytical techniques can be used to form peer group comparisons and determine debt affordability. Key sections of the book address: a framework for debt capacity analysis; benchmarking techniques for comparing debt burden; measuring debt capacity; elements of a comprehensive debt policy; and implementing NACSLB recommended practices. $20 member / $25 nonmember

4. Revenue Analysis and Forecasting
   - This book was written to provide financial analysts and public managers with the tools and techniques they need to improve both the process and the methods for conducting revenue forecasts. Key sections of the book address: the revenue forecasting process; revenue portfolio analysis; qualitative and quantitative forecasting methods; forecasting validation; monitoring revenue projections; and implementing NACSLB recommended budget practices. Included with the book is a CD-ROM containing samples of government revenue forecasts. $20 member / $25 nonmember

5. Decision Tools for Budgetary Analysis
   - This practical guide presents 12 key budgeting analysis tools and explains in clear language how to use them. Discussion covers both basic tools (such as decision tables and decision trees) and advanced tools (such as return on investment and cost-benefit analysis), and is well-illustrated with examples specific to local government budgeting. Brief descriptions and step-by-step procedures are provided for each tool. In addition, the book introduces four techniques for simplifying decisions, and highlights some common pitfalls to avoid. It also presents advice on how to communicate budgetary analysis to decision makers and it shows how decision tools can help governments to accomplish five of the NACSLB recommended practices. $20 member / $25 nonmember

6. Priority-Setting Models for Public Budgeting
   - All jurisdictions must set priorities during the budgetary process, whether by formal or informal methods. This book uses case studies and a review of the public policy literature to offer an intermediate-level discussion of formal methods of conducting governmental priority setting. The book discusses how issues, programs, and projects get on the public agenda in the first place. It then presents the basic framework for formal priority-setting processes used by the U.S. and Canadian governments. The case studies illustrate a diversity of operating and capital budget priority-setting approaches undertaken by a variety of governments. Throughout, the discussion is linked to applicable NACSLB recommended practices. $20 member / $25 nonmember

7. Cost Analysis and Activity-Based Pricing for Government
   - This practical guide explains the fundamentals of cost analysis and shows how to use them for six common types of government decisions and analyses, including: measuring and improving efficiency; setting fees and charges; make-versus-buy decisions; increasing or decreasing the level of service; comparing the long-term costs of capital equipment (life-cycle costing); and buying in bulk.
   - In addition, the 221-page book covers activity-based costing, information systems for cost analysis, and cost-cutting and budget balancing strategies. There are more than 80 user-friendly diagrams and exhibits illustrating important concepts that will help local officials make common government cost decisions. $35 member / $45 nonmember
